                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TITLE
```

```
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LINL at: http://image.llnl.gov
Series: IRAK Plate: 108 Row: o Column: 22
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 9937983.

This cDNA sequence codes for the p120 catalytic subunit (see AAW23948) of pig G-protein regulated phosphatidylinositol-3' kinase, a heterodimeric enzyme which produces the intracellular messenger phosphatidylinositol (3,4,5) -triphosphate in response to activation of trimeric G protein-linked receptors. This novel protein, which calls of haematopoletic origin and is involved in immune system responses which cause inflammation. p120 cDNA was obtained from a probe (see AAT99713) based on an isolated p120 protein (see PAT99713) based on an isolated p120 tryptic peptide. The p120 cDNA clone in pcMN3mycpl20 is deposited as ATCC 97637. The invention encompasses pig and human p101 and p120 nucleotides, host call expression systems, p101 and p120 nucleotides, host call expression systems, p101 and p120 nucleotides antibodies to these proteins, and transgenic animals and knockout animals. Compounds which are useful for treating inflammatory response disorders can be identified by screening assays using a G protein activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 and p120 subunits) can be used to treat arthritis, septic shock, adult respiratory distress syndrome (ABDS), pneumonia, asthma, allergies, reperfusion injury, attherosclerosis, cancer and b12K and activated for disapposis, drug screening and clinical trial monitoring be used for disapposis, drug screening and clinical trial monitoring be used for disapposis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding G-beta-gamma regulated phosphatidyl-inositol-3' kinase, p101 and p120 subunits - useful for diagnosis, drug screening, clinical trial monitoring and treatment of inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3808 BP; 1010 A; 965 C; 953 G; 880 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3808

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes a novel catalytic subunit, p120, from porcine phosphoinositide 3-hydroxykinase (P13K) which is regulated by beta-gamma subunits of trimeric G-protein. Nucleic acid coding for p101 or p120, or p120 gene mutations, are used as probes and primers for identifying p101 or p120 gene mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the hematopoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly inflammation, e.g. arthritis, septic shock, adult respiratory distress syndrome, pneumonia, altergies, reperfusion injury,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence encodes the pig p120 regulatory protein.

The invention relates to the human p101 regulatory protein.

The invention relates to the human p101 regulatory protein.

Which is a subunit of the trimeric G-protein regulated phosphoinositide

Which is a subunit of the trimeric G-protein regulated phosphoinositide

SG - Minase (P13K). The p101 regulatory protein can be used in screening

assays to detect compounds which can be used to treat inflammatory

response disorders. The compounds identified may be antagonists or gonists of G protein-regulated P13K gene expression and/or p101 or p120

gene product activity. These compounds may then be used to control immune
system disorders, in particular arthritis, septic shock, adult

respiratory distress asthma, allergies, repeticion injury,

atherosclerosis, Alzheimer's disease and cancer. P101 proteins and

peptides can be used in the detection of mutant or inappropriately

axpressed p101 regulatory subunits for the diagnosis of immune disorders

and haematopoietic lineage cell activation disorders which will also

assist in devising a proper treatment or therapeutic regime. Using

compounds which affect the signal transduced by the activated p101

regulatory subunit to be identified.
                                                                                                                                                                                                                                                           trimeric G-protein regulated Pi3K, phosphoinositide 30H-kinase; asthma; inflammatory response disorder; arthritis, septic shock; allergy; adult respiratory distress; cancer; reperfusion injury, atherosclerosis; Alzheimer's disease; haematopoietic lineage cell activation disorder;
                                                                                                                                                                                                                                       system disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated p101 regulatory polypeptide, a subunit of the trimeric G-protein regulated P13K, is useful for screening compounds which can be used to treat inflammatory response disorders
                                                                                                                                                                                                                                     protein; p120 protein; regulatory subunit; immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BP; 1010 A; 965 C; 953 G; 880 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a novel catalytic subunit, p120, from human phosphoinostides 3-hydroxykinase (P13K) which is regulated by beta-gamma subunits of trimeric G-protein. Nucleic acid coding for p101 or p120 or their fragments, are used as probes and primers for identifying p101 or p1210 gene mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the haematopoietic system. The related proteins, antibodies, agonists and antegonists can be used similarly. The proteins, antibodies, agonists and antegonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly syndrome, pneumonia, asthma, allergies, reperfusion injury, attherosclerosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                             Phosphoinositide 3-hydroxykinase, PI3K, trimeric G protein, human, adapter subunit, regulatory subunit, p101, p120, catalytic subunit, detection, diagnosis, activation disorder, haematopoietic system, treatment, immune disorder, inflammation, arthritis, septic shock, adult respiratory distress syndrome, pneumonia, asthma, allergy, reperfusion injury, atherosclerosis, Alzheimer's disease, cancer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid encoding regulatory (p101) and catalytic (p120) subunits of a heterodimeric phosphatidylinositol.3' kinase - useful in treatment and diagnosis of immune system disorders, e.g. arthritis, cancer and Alzheimer's disease

The invention relates to the human pl01 regulatory protein.

The invention relates to the human pl01 regulated phosphoinositide of the trimeric G-protein regulated phosphoinositide assays to detect compounds which can be used to treat inflammatory response disorders. The compounds identified may be antagonists or assays to detect compounds identified may be antagonists or gonists of G protein-regulated Pl3X gene expression and/or pl01 or pl20 gene product activity. These compounds may then be used to control immune system disorders, in particular arthritis, septic shock, adult respiratory distress, asthma, allergies, reperfusion injury, atherosclerosis, Alzheimey's disease and cancer. pl01 proteins and peptides can be used in the detection of mutant or inappropriately expressed pl01 regulatory subunits for the disgnosis of immune disorders and hematopoietic lineage cell activation disorders which will also assist in devising a proper treatment or therapeutic regime. Using genetically engineered host cells to screen for compounds also allows communics which affect the signal transduced by the activated pl01
                                                                                                                                                                                                                                                                                                                                             pl01 protein; pl20 protein; regulatory subunit; immune system disorder; trimeric G-protein regulated Pl3K; phosphoinositide 30H-Kinase; asthma; infllammatory response disorder; arthritis; septic shock; allergy; adult respiratory distress; cancer; reperfusion injury; atheroselerosis; Alzheimer's disease; haematopoietic lineage cell activation disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated p101 regulatory polypeptide, a subunit of the trimeric G-protein regulated P13K, is useful for screening compounds which can be used to treat inflammatory response disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BP; 1471 A; 1173 C; 1149 G; 1367 T; 2 other;

Also described is an array of mulcie caid polymers immobilised on a solid support, comprising a solid support, at least two different nucleic acid polymers which are each specific for a different gene associated with lipid metabolism, synthesis or action, where each nucleic acid polymer is located at a predetermined position on the solid support, and the array comprises nucleic acid polymers which are specific for less than 100 genes other than the selected genes. The method is useful for determining tumour characteristics in a tissue sample taken from a patient. The present sequence represents a human lipid-ssociated gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (PI3K; pilodelta) enzyme that binds to the catalyric subunit via a SH3 domain-containing polypeptide such as LASP-1. Also described are methods of assaying the specific binding affinity of the PI3 kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undesirable or excessive activity of PI3Kdelta. For example the modulators can be used for inhibiting the growth or proliferation of cancer cells (e.g. malignant neoplasms of lymphoid and reticulcendothelial tissues, Hodgkin's lymphoma, leukaemias), inflammatory diseases (e.g. rheumatoid autoimmune diseases (e.g. systematic lupus erythematosus), inflammatory bowel diseases (e.g. chronic inflammatory bowel disease), inflammatory dermatoses (e.g. contact dermatities) central or peripheral nervous system inflammatory dispetes mellitus. The present sequence encodes for human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A 402 bp cDNA fragment was amplified from a human bone marrow library using FOR primers corresponding to amino acid sequences xNGDDLR and HIDFG. The amplified fragment was used to probe a human U937 ocal cDNA library and several overlapping clones were isolated. The largest clone coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (FISK) that differs in its regulatory mechanism from the known PI3K-alpha and -beta enzymes. The new enzyme has been designated PI3K-gamma. Another clone, coding for a PI3K-gamma of 1050 residues and having the present sequence, was then isolated. The enzyme can be used as an immunogen. The enzyme, antibodies against it or nucleic acid encoding it can be used for modulating cell proliferation, receptor-mediated signal transmission, histamine secretion, nerve cell differentiation, silver, and anti-lipolytic activity or for treating

The amplified fragment was used to probe a human U337 cell cDNA library and several overlapping clones were isolated. The largest clone had the present sequence and coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (PISM) that differs in its requiatory mechanism from the known PISK-alpha and -bere anzymes. The new enzyme has been designated PISK-gamma and can be used as an immunogen. The enzyme, antibodies against it or nucleic acid encoding it can be used for modulating cell proliferation, receptor-mediated signal transmission, histamine secretion, nerve cell differentiation, glucose transport and anti-lipolytic activity or for treating Alzheimer's disease.
